A solution for wireless seedling weighing

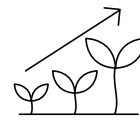

Consistent, precise, and conveniently managed weighing of the seedlings is important for successful horticulture operation. The combination of Aranet and Voshol technology enables:

Wireless & Continuous seedling weighing

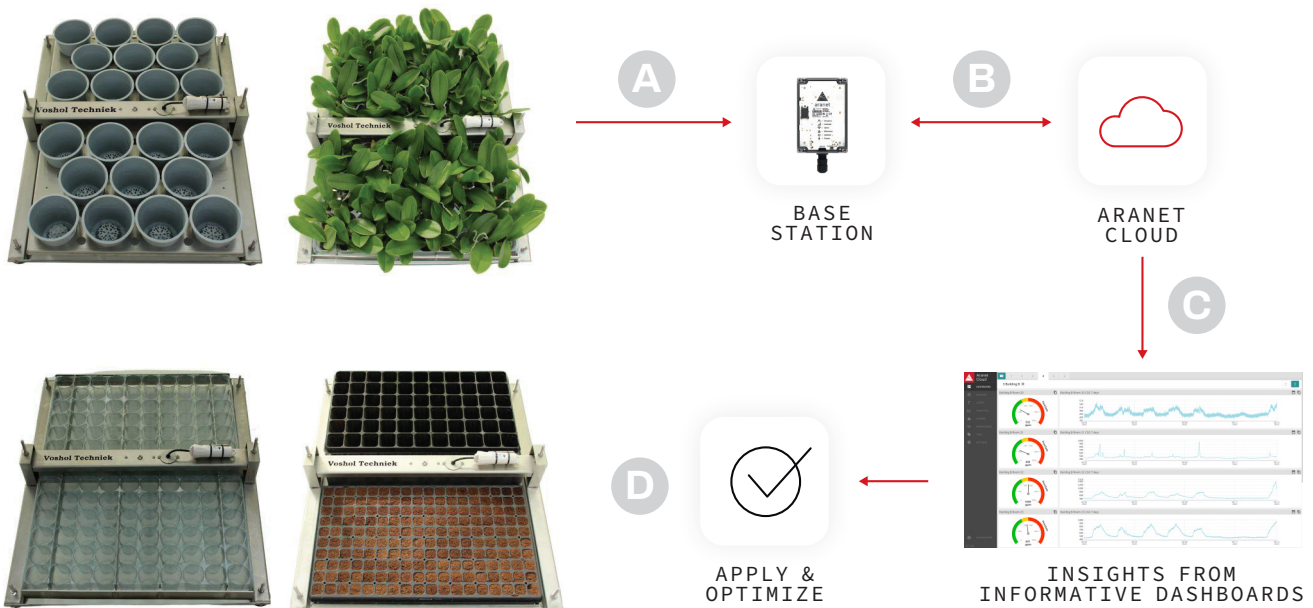

Consistent & Easy weight data access

Seedling growth optimization & precision irrigation

How it works

Aranet wireless sensor attached to the Voshol weighing frame with multiple seedlings sends measurement data to the Aranet base station connected to Aranet Cloud where it can be accessed any time, anywhere.

The wireless solution for consistent and reliable seedling weight measurement works in following way:

- A. Weight data from Voshol frame are sent by Aranet wireless sensor to the Aranet base station.
- B. Base station data is accessed from Aranet cloud software locally or remotely.
- C. Gain insights on the seedling weight changes and patterns from dashboards in Aranet Cloud. Set email or SMS alarms for timely reaction.
- D. Optimize growth process and seedling irrigation resulting in saved water and better root system.

High scalability of weighing

Regardless of the size of your business, the Aranet and Voshol seedling weighing solution is scalable with no limits – it is only up to you how many weighing frames you need. Add more as your business grows.
